Pre-approved by ECO Canada for wage funding; employers may get up to ~80% of my wages reimbursed (≈\$18K to \$25K).
Open to relocate Canada-wide.

WORK EXPERIENCE

Web Developer IP SDN Co-op - Nokia, Ottawa, ON Jan 2021 – Dec 2021 & May 2023 – Aug 2023 (16 months total)

- Delivered production UI features for Nokia's carrier Network Services platform, implemented master-detail (nested) tables via Nokia's internal **AG-Grid** wrapper; shipped related UI updates for Flex Algo configuration workflows (**React/Redux**). Worked in a focused 3-person squad (2 software engineers + me)
- Navigated in a large codebase consuming **10+** internal npm packages (e.g., nokia-react-table, nokia-react-core-*) from a private registry; integrated shared components and handled versioning/peerDeps across teams.
- Diagnosed and fixed a **loading data race** where the grid could render empty after the loading overlay; aligned Redux async flow with the grid lifecycle to resolve it.
- Integrated the internal Schema Form (Formik-based) package to render JSON-Schema driven forms in the app.
- Worked in an Agile cadence, pulled tasks from the backlog, maintained accurate ticket status/notes/screen recordings, gave concise daily standup updates, and set up meetings with QA/BE/UX to resolve blockers.

Teaching Assistant - Carleton University, Ottawa, ON

Jan. 2020 - Apr.2022

- Led tutorials and office hours, graded assignments, and coached coding best practices across multiple courses.

SKILLS

Web Development: React, Redux, Spring Boot, Tailwind, Responsive UI, Node.js, Express, REST, Socket.IO, Prisma, PostgreSQL

Tooling/DevOps: Jest/RTL, Playwright, Postman, Github, Docker, Kubernetes, Github Actions,

Languages & Frameworks: TypeScript/JavaScript, HTML, CSS, Python, Java (OOP) also: C/C++, C#

PROJECTS

Real-time Chat App · [Deployment Link](#) · [Github Repo](#)

June 2025- Current

- Built a full-stack chat platform (**React/TypeScript, Tailwind CSS, shadcn/ui, Node/Express, Prisma/PostgreSQL**) with authentication, and conversation management. **End-to-end design & implementation:** UI/UX, data model, and APIs.
- Implemented **real-time messaging** and online presence with **Socket.IO**, broadcasting new messages and conversation updates across multiple devices instantly.
- Designed state management with **Zustand** + typed selectors, ensuring minimal re-renders and consistent single source of truth for conversations/messages.
- Structured as a PNPM monorepo, sharing a single source of truth for data validation between client and server so the API contract matches the UI, and deploying with automated production releases via GitHub CI/CD on Render.

ImagenRoom · AI Interior Designer (Flask + React)

Apr 2025 - June 2025

- Built the React/Vite front end from scratch:image upload, controlled forms, previews; built a product card list and a furniture size table; Tailwind/DaisyUI, error handling.
- Delivered all the Flask REST endpoints from spec/tests: generate scene, estimate sizes, furniture lookup, include **image→Vision→LLM→search** (Cloud Vision, Gemini, SerpAPI/Lens, Imgur);

CMPT 756 · Microservices: Serverful vs Serverless (Course Project) · [Github Repo](#)

Sep 2023 - Dec 2023

- Architected a microservice-based application, building all services from the ground up using Node.js.
- Containerized the services with Docker and deployed them to AWS EKS using Kubernetes, managing ingress with Nginx.
- Implemented a custom Event Bus for decoupled communication and automated the CI/CD pipeline with GitHub Actions.

EDUCATION

Master of Professional Computer Science (Big Data), Simon Fraser University, Burnaby, BC

Sep 2022 – Feb 2024

Bachelor of Computer Science Honours, Co-op, Minor in Statistics, Carleton University, Ottawa, ON

Sep 2016 - Apr 2022
